

precipitating fine silver particles on the surface of the  
light reflector layer; and

confronting a transparent substrate with said substrate  
on which the light reflector layer is formed, and sandwiching  
a liquid crystal layer between the substrates.

---

Please add the following new claim:

---

--29. A process according to claim 18, wherein the step  
of forming a light reflector layer of the mixture includes  
exposing the mixture to light, thereby photolithographically  
forming the light reflector layer of a desired pattern, and  
the step of precipitating fine silver particles on the surface  
of the light reflector layer includes heating the light  
reflector layer under a predetermined temperature condition,  
thereby precipitating the fine silver particles on the surface  
of the light reflector layer.--

---

#### REMARKS

By the above amendment, claim 18 has been amended to  
delete features, such that claim 18 now recites features which  
are coextensive with the features of claim 1, and a new  
dependent claim 29 which depends from claim 18, has been  
added, reciting the features which have been deleted from  
claim 18.
